What We Do

We made a page for adding recipes, and the main page where these same recipes are published.

Then we made the functions of assigning comments and ratings to these posts themselves.

Add Comm

```
func updateComm(writer http.ResponseWriter, request *http.Request) { 1 usage Asikow
    request.ParseMultipartForm( maxMemory: 10 << 20)
    session, err := session(writer, request)
    receipt, err := data.ReceiptsByUserID(session.User_ID)
    if err != nil {
        // danger method
        return
    }
    receipt.Instruction = request.PostFormValue( key: "Comm")
    err = receipt.Update()
    if err != nil {
        //danger method
        return
    }

    http.Redirect(writer, request, url: "//receipts-main-page", code: 302)
}
```

```

func (receipt *Receipt) Update() (err error) { 1 usage  Asikow +1
    if existsUsernameNotID(receipt.Name, receipt.ID) {
        //danger method
        return
    }
    st, err := DB.Prepare(query: "UPDATE USERS SET INSTRUCTION = $1 WHERE ID = $2")
    if err != nil {
        return
    }
    defer st.Close()
    _, err = st.Exec(receipt.Instruction, receipt.ID)
    return
}
